

EMPLOYMENT AND UNEMPLOYMENT

JANUARY TO APRIL 1976

AUSTRALIAN BUREAU OF STATISTICS

CANBERRA

Reference No. 6.4

EMPLOYMENT AND UNEMPLOYMENT, JANUARY TO APRIL 1976

This bulletin contains particulars of the numbers of employed wage and salary earners (referred to in the tables as "employees"), job vacancies registered and unemployed persons.

Seasonally adjusted statistics appear in Tables 1, 3 and 9-12. The methods used in seasonally adjusting these statistics are explained in *Seasonally Adjusted Indicators*, 1976 (Reference No. 1.10) to be issued shortly.

Preliminary estimates of employees are published each month in Employed Wage and Salary Earners: Preliminary (Reference No. 6.12).

Revision of series. The estimates of employed wage and salary earners shown in this bulletin are based on benchmarks derived from the 1971 population census and other sources (see paragraph 7, page 2). Detailed estimates for the period June 1971 to June 1975 will be published in a special bulletin: Employed Wage and Salary Earners, June 1971 to June 1975 (Reference No. 6.23), to be issued shortly.

NOTE. Inquiries concerning these statistics may be made in Canberra by telephoning Mr Joe Christensen on 52 6655 or, in each State capital, by telephoning the office of the Australian Bureau of Statistics.

I. EMPLOYED WAGE AND SALARY EARNERS

The figures in this section generally relate only to civilian wage and salary earners, not the total labour force: they therefore exclude employers, self-employed persons, unpaid helpers and the unemployed. Also excluded, because of the inadequacy of current data, are wage and salary earners in agriculture and private households employing staff. For the sake of brevity, wage and salary earners are referred to in the tables as "employees". Defence forces are included in Table 1.

- 2. The data needed to derive the estimates for periods subsequent to the benchmark date (June 1971) are obtained from three main sources, namely, (a) current payroll tax returns; (b) current returns from government bodies; and (c) some other current returns of employment (e.g. for hospitals); the balance, i.e. unrecorded private employment, is estimated. At June 1971 recorded employment obtained from the foregoing sources accounted for about 90 per cent of the employees in the industries covered, as determined by the benchmarks.
- 3. The estimates in Tables 1 to 7, except those relating to government employees and defence forces, are based on comprehensive data (referred to herein as "benchmarks") derived for the purpose from the population census of June 1971 and other sources, (see paragraph 7). Month-to-month changes shown by current data (see paragraph 2) are linked to the benchmark data to derive the monthly estimates.
- 4. Although the series measure reasonably well the short-term trends in employment in the defined field, they may be less reliable for longer-term measurement. There are conceptual differences between benchmark and current data, and changes in such factors as labour turnover, multiple jobholding and part-time working all affect the trend over longer periods.

Concepts and definitions

5. The concepts and definitions applicable to these estimates are those adopted at the 1971 population census, which conformed closely to the recommendations of the Eighth International Conference of Labour Statisticians. At the census the following questions were asked in respect of all persons fifteen years of age and over:

"Did this person have a full or part-time job, or business or farm of any kind last week (even if this person was temporarily absent from a job because of sickness, holidays, industrial dispute, etc.)?"

"Did this person do any work at all last week for payment or profit (even if this person was working only part-time or helping without pay in a family business)?" Provided they had not been temporarily laid off by their employers without pay for the whole of the week, persons who answered "yes" to either of these questions were classified as employed. Persons in this category were classified as wage or salary earners if on their census schedule they were stated to be "a wage or salary earner" in the job they held in the previous week.

6. Government employees comprise not only administrative employees, but also all other employees of government bodies (Australian, State, local and semi-government) on services such as railways, road transport, banks, postal and telecommunication, air transport, education (including universities), radio and television, police, public works, factories, departmental hospitals and institutions, etc.

Adoption of new benchmarks

- 7. As results from each successive population census become available it is customary to derive from them new benchmarks for the monthly employment series, and to revise the published estimates for all periods subsequent to the date of the previous census. Benchmarks for June 1971 were established by analysing data from the 1971 population census and other relevant sources such as special returns from government bodies and the Bureau's economic censuses and surveys.
- 8. For a number of reasons the estimates of employed wage and salary earners previously published for June 1971 differed from the corresponding figures obtained from the 1971 population census. The principal reasons for the differences are as follows:
 - (a) there is an unavoidable accumulation of errors in the intercensal employment estimates, e.g. in the estimates of movements in unrecorded employment;
 - (b) apart from the undercount to which population censuses are generally subject, evidence from census post-enumeration surveys indicates that the completion of census questionnaires by householders tends to identify a smaller number of persons as being in the labour force than do other methods of measurement (e.g. household surveys conducted by personal interview), and that components of the total labour force, such as employed wage and salary earners, tend to be affected in the same way;
 - (c) estimated monthly movements in civilian employment are derived mainly from returns from employers relating to establishments or enterprises, but the population census figures are derived from particulars recorded by individuals on census schedules. The latter do

not in all cases provide precise information to allow accurate coding of industry;

- (d) previously published estimates for June 1971 included about 7,000 male and 17,000 female trainee teachers who are not included in the new benchmarks or subsequent monthly estimates;
- (e) crews of overseas ships are excluded from the monthly employment estimates;
- (f) some persons are not enumerated in the census in the State or Territory in which they work, e.g. persons resident in New South Wales and working in the Australian Capital Territory and persons who at the time of the population census are on holidays interstate.
- 9. Population census data were not always accepted as a matter of course in determining the June 1971 benchmarks. The factors mentioned above were taken into account and particulars of employment obtained from other sources (see paragraph 7 above) were used in analysing and, where necessary, in revising the estimates. It should be noted that figures in this bulletin are subject to further revision as the results of later censuses and surveys become available.

Current data

- 10. Current data supplied by reporting enterprises or establishments generally refer to persons on the payroll for the last pay-period in each month. Persons who are on paid leave or who work during part of the pay-period and are unemployed or on strike during the rest of the period are generally counted as employed. Those not shown on employers' payrolls because they are on leave without pay, on strike or stood down for the entire period are excluded.
- 11. In the States payroll tax returns are lodged at present by all employers paying more than \$800 a week in wages (other than certain Australian Government bodies, religious and benevolent institutions, public hospitals and other similar organisations specifically exempted under the Australian and State Payroll Tax

Acts, 1971-1975). Up to the end of 1975, payroll tax returns were lodged by employers paying more than \$400 a week in wages. This level of \$400 a week still applies to employers in the Territories.

Industry

12. The industry classification used in this bulletin is the Australian Standard Industrial Classification (ASIC), described in the Bureau publication Australian Standard Industrial Classification (Preliminary Edition), 1969, Volume 1. This industry classification is not directly comparable with those adopted for population censuses before 1971 and used in previously published estimates of civilian employees.

Estimates for earlier periods

- 13. For the period June 1966 to June 1971 detailed industry figures for each State and Australia and the government employment series were published in two special bulletins (Reference No. 6.23) issued on 24 April 1970 and 11 January 1972. However, estimates by industry in those bulletins are not directly comparable with the estimates by industry contained in this bulletin, due to the adoption of ASIC, (see previous paragraph).
- 14. It is expected that in due course a revised series will be published for the period June 1966 to May 1971, classified according to ASIC. However, it may not be possible to provide as much industry detail as for June 1971 and subsequent periods. ASIC estimates cannot be derived for periods prior to June 1966.

Symbols and other usages

- .. Nil or less than 50 persons
- r Figure or series revised since previous issue
- Break in continuity of series (where drawn across a column between two consecutive figures.)
 - † Affected by industrial disputes

Any discrepancies between totals and sums of components in tables are due to rounding.

GRAND TOTAL (b)	279,697	115,268	394,965

⁽a) Includes employees of the Departments of the Parliament, who are appointed under the Public Service Act but to whom special provisions apply. Also includes the Australian National University. (b) These totals differ from those shown in Table 3 because, for persons employed under the Public Service Act, all part-time employees are excluded and employees overseas are included.

2. UNEMPLOYED PERSONS

The tables in this section contain (a) estimates of the total number of persons unemployed, derived from the quarterly population survey, (b) the numbers registered with the Commonwealth Employment Service as unemployed, and (c) the number in receipt of unemployment benefit.

Total Unemployed Persons : Population Survey Estimates

- 2. The quarterly population survey is carried out on a sample basis throughout Australia in February, May, August and November each year. Interviews are conducted during a period of four weeks in the State capital cities and two weeks in other areas. Particulars of the number of persons employed or unemployed, and of the total labour force, are published each quarter in a mimeographed bulletin *The Labour Force* (Reference No. 6.20).
- 3. The definition of unemployed persons has been revised. See the May 1976 issue of Unemployment (Preliminary) (Reference No. 6.35). Unemployed persons are now defined as all civilians aged 15 years and over who either:
 - (a) during the survey week did not work and did not have a job, but could have taken one had it been available, and had been looking for full-time or part-time work in the four weeks up to and including the survey week (including persons who would have been prevented from taking a job in the survey week by their own temporary illness or injury, or by their having made arrangements to start after the survey week in a new job in which they would have preferred to start in the survey week) or
 - (b) were waiting to be called back to a job from which they had been temporarily stood down without pay for four weeks or less (including the whole of the survey week).
- 4. Unemployed persons therefore comprise those looking for full-time work, those looking for part-time work and those temporarily laid off from either full-time or part-time jobs. This definition of unemployed persons conforms closely to that recommended by the Eighth International Conference of Labour Statisticians, Geneva, 1954.
- 5. The table on page 14 contains estimates on the new basis for the period from February 1975 to May 1976.
- 6. Since the estimates are based on a sample, they may differ from the figures that would have been obtained from a complete census using the same questionnaires and procedures. There are about two chances in three that the differences would be less than 4,000 for total unemployed males, less than 3,500 for total unemployed females and less than 5,000 for total unemployed persons, and about nineteen chances in twenty that they would be less than twice these figures.

Further details about the survey and the reliability of estimates will be found in the quarterly bulletin *The Labour Force* (Reference No. 6.20).

- 7. The sample estimates will differ from the number of persons registered with the Commonwealth Employment Service (see Table 10) as not employed, awaiting placement in full-time employment, for a number of reasons, including the following:
 - (a) the survey estimates include persons looking for part-time work as well as those looking for full-time work.
 - (b) they exclude persons who did any work at all during the survey week, even though they may subsequently have become unemployed and registered with the Commonwealth Employment Service, or have done so little work as not to lose eligibility for unemployment benefit,
 - (c) they represent averages over a period (see paragraph 2), whereas the numbers registered refer to a particular day,
 - (d) they are subject to sampling variability (see paragraph 5).
 - (e) they include some unemployed persons (particularly females) who do not register with the Commonwealth Employment Service, and
 - (f) they exclude any persons registered as unemployed who find jobs but do not notify the Commonwealth Employment Service at once that they have done so.

Seasonally Adjusted Series

All adjustment methods which compute seasonal factors as some average of the seasonal pattern for previous years are subject to inherent limitations when the pattern changes. Such a change appears to have been occurring in the last year in the Commonwealth Employment Service series "school leavers" and the quarterly population survey series "persons aged 15 to 19 years looking for their first job". There are indications that the pattern has also changed although to a lesser degree, for the series excluding school-leavers and persons aged 15 to 19 years looking for their first job. The changes appear to be associated with the high level of unemployment which was reached in late 1974. The adjustment method is necessarily based on seasonal patterns of recent years, including years of relatively low unemployment. The method used does not appear to work satisfactorily at the new high level, evidently because the amplitude of the seasonal fluctuations has not increased in proportion to the level of the series. Research is being carried out with other methods which may provide more satisfactory adjustment for recent months. In the meantime, no claims are made that the series, with or without school-leavers or persons aged 15 to 19 years looking for their first job, are being satisfactorily adjusted. They should therefore be treated as aids to subjective judgment only.

(a) Aged 15 years and over. For definition, see page 13. (b) The number of unemployed in each group as a percentage of the labour force in the same group. (c) See page 13 paragraph 8 regarding the reliability of the estimates. See also note (c) to Table 5. (d) Revised following annual reanalysis of the series. (e) Because of the effects of cyclone Tracy the population survey was not conducted in Darwin in February 1975. The estimates for this period therefore exclude Darwin. It is estimated that at the time of the survey about 12,000 males and 5,000 females aged 15 years and over were living in Darwin. (f) The sample size was reduced for the November 1975 survey. Consequently the standard errors for estimates from that survey are larger than usual. For details see the November 1975 issue of The Labour Force (Reference No. 6.20).

years looking for their first iob". There are addications that the pattern has also changed although to leaser degree, for the senes excluding school-leavers not persons agod 15 to 19 years looking for their first ob. The changes appear to be associated with the high ob. The changes appear to be associated with the high evel of unemployment which was reached in late 1974 antierns of recent years, including years of relatively low anterns of recent years, including years of relatively low anterns of recent years, including years of relatively low work satisfactorily at the new high level, evidently because the amplitude of the seasonal frictuations has not increased in proportion to the level of the series, and increased in proportion to the level of the series, may provide more series/actory adjustment for recent months. In the meantime, no claims are made that the series, with or without school-leavers or persons aged 15 series.

Since the estimates are based on a sample, they may distar from the figures that would have been obtained from a complete causes using the same contionnaires and procedures. There are about two chances as three that the differences would be less than a door for total unemployed males, iess than 3,000 for total unemployed females and less than 5,000 for total unemployed females and less than 5,000 for total contents.

^{†† &#}x27;Affected by the deferral of the interviewing period by one week. It is estimated that had interviewing taken place in the normal period, the seasonally adjusted figure for persons would have been higher by some 5,000 to 10,000.

(a) Comprises all persons who were still registered with the Commonwealth Employment Service (C.E.S.) at the Friday nearest the end of the month, who claimed when registering that they were not employed, and who were seeking full-time employment, i.e. 35 hours or more per week. They include persons referred to employers but whose employment was still unconfirmed, and persons who had recently obtained employment without notifying the C.E.S., all recipients of unemployment benefit are included. (see Table 11). (b) Includes the Australian Capital Territory. (c) Includes the Northern Territory. (d) See page 13 paragraph 8 regarding the reliability of the estimates. See also note (c) to Table 5.

⁽a) Number on benefit at Saturday nearest the end of the month until February 1976. The introduction of fortnightly payments in March 1976 has altered the basis of collection of numbers on benefit to four to six-week accounting periods. Figures now show numbers on benefit at 'the dates indicated. (b) State and Territory classification is based on location of office from which payment of benefit is made. (c) See note (c) to Table 5. (d) Not strictly comparable with later figures shown in this table due to the introduction of new administrative procedures in April 1975.

⁽a) Vacancies notified to the CES which were still unfilled at the Friday nearest the end of the month and which employers claimed could be filled if labour were supplied immediately or within the following month. Vacancies for full-time, part-time, permanent, temporary, and seasonal positions are included. (b) Includes the Australian Capital Territory. (c) Includes the Northern Territory. (d) See note (c) to Table 5.

NOTE. Sample surveys were conducted by the Australian Bureau of Statistics in March 1974 and March 1975 to obtain information on the level and composition of job vacancies. For a number of reasons the estimates obtained from these surveys differed substantially from the numbers of vacancies registered with the CES at those dates. For example, the survey estimate of total vacancies at March 1975 was 55,200, while the CES figure was 33,746. Results of the surveys and reasons why the survey estimates differ from CES statistics were published in Job Vacancies, March 1974 and March 1975 (Reference No. 6.49).
